Brief description of the main RESEARCH ACTIVITIES

The research activity has embraced many of the branches of Gynecology and Obstetrics.

Within the Postgraduate School, I dealt with the clinical development of laparoscopic and mini-laparoscopic techniques for the surgical treatment of benign and malignant gynecological pathology. In particular, I was able to follow the evolution of laparoscopy as a technique to treat early-stage gynecological tumors.

Particular attention was paid to urogynecological problems, with research on female continence, pharmacological and surgical interventions to treat it, its risk factors, diagnostic investigations addressed to it and possible correlates in daily, social and personal life. Great interest was then dedicated to the problems of prolapse both as regards its genesis and its treatment.

As part of the Research Fellowship and Research Collaboration with the Division of Gynecologic Surgery and Gynecologic Oncology of the Mayo Clinic at Rochester, Minnesota (USA), between 2008 and 2010, I was able to deal with the various areas of Gynecologic Oncology, particular with the Endometrial Carcinoma, in its epidemiological, clinical, surgical, and biomolecular aspects.

In the three years of PhD in “Experimental and Oncologic Medicine”, I conducted a translational research project to highlight the ability of Endometrial Carcinoma cells to produce Fibrinogen chains at the nuclear and cytoplasmic level.

In the years of Clinical Service as Consultant at the Obstetrics and Gynecological Clinic of the University of Insubria, the research activity has taken into consideration different aspects concerning gynecologic surgery for benign, malignant, and urogynecological pathology, in the following aspects:

- Minilaparoscopy for benign and malignant pathology;*
- Innovative techniques in gynecological surgery;*
- Surgical treatment of gynecological malignancy;*
- Treatment of urinary incontinence;*
- Treatment of genital prolapse;*
- Advanced nerve-sparing surgical treatment of severe endometriosis.*

In the field of benign diseases, I have published as first author the 3 larger case series, in the world, on total laparoscopic hysterectomy for large uteri (weighing more than 1 kg and 1.5 kg).

At the Gemelli Polyclinic in Rome, the research interest was focused on Gynecological Oncology, and in particular on projects related to the surgical treatment of the main gynecological neoplasms and the possible influence of nutritional status on short and long-term outcomes in cancer patients.

In the last two years, I have focused my scientific activity particularly on the sentinel lymph node method for the treatment of initial ovarian cancer. This is an extremely new and promising technique. In 2019, I published as first author the largest case series, in the world, and the first systematic review on this topic.

Since I arrived in Biella, in addition to continuing the research activity on the sentinel lymph node in ovarian cancer, I have promoted two research protocols at the Ethics Committee. One research protocol was on the laparoscopic hysterectomy for benign pathology, the other was on the anatomy of the lymphatic drainage for uterine and ovarian cancers.

In all these years, however, I have had the opportunity to constantly collaborate in research projects focused on other areas of the discipline, especially Obstetrics. With regard to Obstetrics, the main publications have addressed the clinical activity in the delivery room, the cardiotocographic trace interpretation, the methods of labor induction, and the use of aneuploidy screening texts.

In the years from 2005 onwards, I coordinated national and international scientific studies, as evidenced by the multiple publications in journals indexed on PubMed and Scopus.

ORGANIZATIONAL, CLINICAL and CARE ACTIVITIES

The main fields are the following::

- *Training of doctors and students in the field of basic and advanced gynecology and obstetrics.*
- *Human resources management*
- *Organization of the activities of Doctors, Midwives, Nurses in the context of a Hospital and Provincial Territorial Consultation Service (In the 24 months in which I was Director of the Complex Unit of Gynecology in Biella, the data provided by the ASL Biella attested that the productivity of the Complex Unit of Obstetrics and Gynecology increased by 40%, with an increase in active mobility of 120% and a reduction in passive mobility of 40%, against a cost increase of 5%. At that time, the ASL Biella was the second center in Piedmont for the number of treated ovarian carcinomas and the third for the number of hysterectomies).*
- *Organization and Editing of the Corporate and Regional PDTAs*
- *Participation in Corporate, Quadrant and Regional Multidisciplinary Interest Groups on Cancer*
- *Advanced obstetric surgery*
- *Advanced procedures in Gynecologic Oncologic Surgery, including surgery of the upper abdomen*
- *Deep endometriosis addressed with nerve-sparing surgery*
- *Mastery of all types of surgical approaches to gynecological pathology*
- *Surgical procedures for gynecological pathology of all degrees of severity*
- *Surgical procedures for the correction of pelvic static defects and anti-incontinence procedures.*

High ability and knowledge also in the following areas:

- *Obstetric ultrasound (over 3000 I and II level obstetric ultrasound scans for the assessment of growth, well-being, and fetal morphology)*
- *Gynecological ultrasound*
- *Prenatal Diagnosis (over 100 amniocentesis and 49 villocentesis)*
- *Delivery room activities (even in highly complex conditions and obstetric emergencies)*
- *On-call duties and surgical interventions on gynecological and obstetric emergency conditions*
- *Follow-up of pathological pregnancies*
